

Heatmap showing the association of HLA polymorphisms with TS (Tumor Susceptibility) and NK\_T (Natural Killer T cell) phenotypes. The y-axis lists HLA polymorphisms (e.g., HLA-F - LILRB1, HLA-F - CD8B). The x-axis lists TS and NK\_T phenotypes (e.g., NK\_T -> CD8\_Naive (TS\_Before), NK\_T -> CD8\_Naive (TS\_After)). The color scale represents the Commun. Prob. (Common Probability) from min (blue) to max (red). The p-value scale is shown on the right, with 0.01 < p < 0.05 (small black dot) and p < 0.01 (large black dot).
